

Simple git-ops tool for Podman and systemd

Ondřej Budai (■■■)

My goal: Host these

Jellyfin

Syncthing

Forgejo

on this

I have 1 problem: I want GitOps

Update flow:

- 1) Change a declarative file
- 2) Commit & push
- 3) The server auto-magically applies the change ✨

```
kind: Deployment
```

```
spec:
```

```
  containers:
```

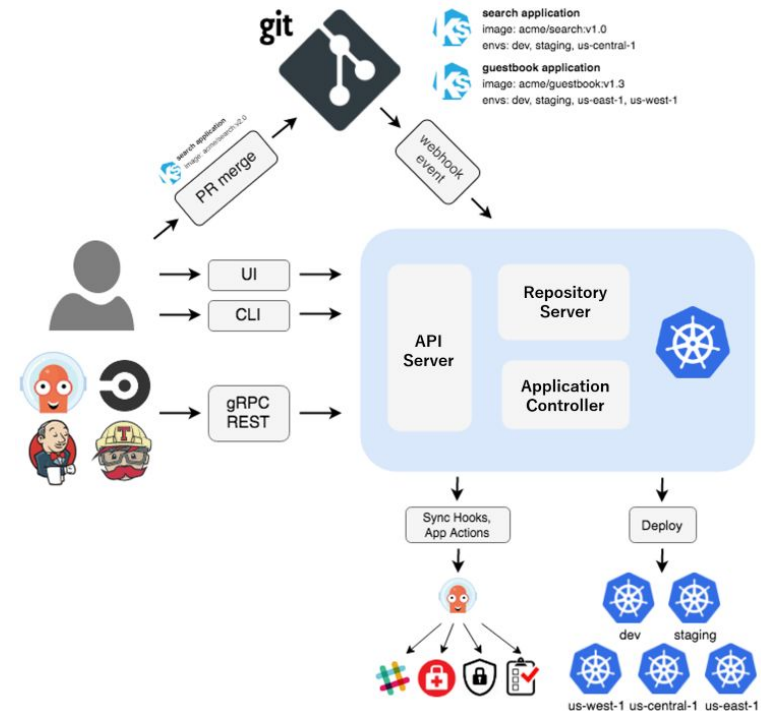

```
-- - image: docker.io/syncthing/syncthing:1.29.7
```

```
++ - image: docker.io/syncthing/syncthing:1.30.0
```

```
    name: syncthing
```

```
    ports:
```

```
      - containerPort: 22000
```

spec:

containers:

```
-- - image: docker.io/syncthing/syncthing:1.29.7
```

```
++ - image: docker.io/syncthing/syncthing:1.30.0
```

```
name: syncthing
```

```
ports:
```

```
- containerPort: 22000
```

I have k8s problems now.

I miss Podman.

So I made  orches !

+

podman
